

Applied Engineering & Materials Science *for Lighter, Stronger, Quieter Vehicles*

For more than 50 years L&L Products has been working closely with the automotive industry to make vehicles lighter, stronger, quieter and safer. Today we partner almost all of the world's major automobile manufacturers - many on a global basis.

With our highly specialized product engineers, designers and fabrication personnel, we are able to combine materials science, design engineering and application technology in order to develop customer-specific solutions.

As cars have become considerably more complex, L&L Products has developed many new materials, parts and applications to answer new needs: high expanding, low cost sealing and noise-absorbing materials for acoustics; and most recently high performance heat activated expanding adhesives for structural inserts and dissimilar bonding solutions.
