

DECI-TEX Sound Absorption

The DECI-TEX platform is a fiber-based, acoustic technology that yields a broad range of products, all being tunable and engineered for customer-specific applications. All versions of DECI-TEX are created with the purpose of shifting the acoustic landscape by delivering better acoustic performance at lighter weights and with less material utilization.

Primary product categories include:

DECI-TEX V - Vertically-lapped, lofted sound absorption materials (flat cut parts).

DECI-TEX M - Thermoformable, vertically-lapped molded materials (variable thickness molded parts).

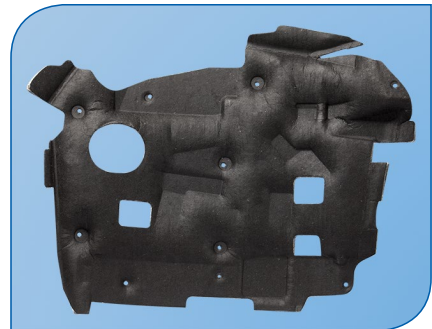

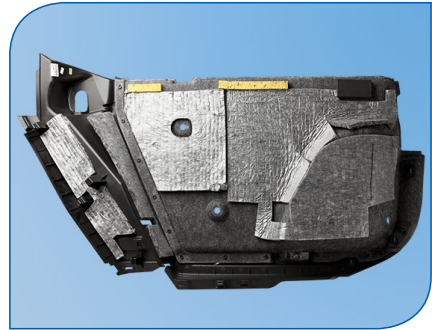

DECI-TEX T - Thermoformable acoustic sheet-like materials (thin, rigid molded parts).

The DECI-TEX capability includes a fully vertically-integrated technology and skill-base delivering greater value to customers.

- *Fiber blends (for enhanced acoustics, stiffness, thermal performance, moldability, etc)*
- *Lamination (acoustic facings with non-wovens/films/foils and adhesive backing)*
- *Secondary processing (sheet forming, in-line lamination, high speed cutting, molding, pressing)*

Key Product Attributes

- *Excellent sound absorption*
- *Tunability and customization of acoustic profile*
- *Lightweight versus traditional materials*
- *Reduced material utilization through design optimization*
- *Engineered mechanical resilience*
- *Ease of handling and application during assembly*
- *Minimal environmental footprint*
- *Zero odor / mildew*
