

Thermo-Acoustic Engine Compartment Insulator

L&L DECI-TEX offers fiber-based, acoustic solutions that are precisely tuned and engineered for customer-specific applications in engine enclosures.

DECI-TEX delivers a unique value proposition founded on premium acoustic performance at lower weights and with less material usage compared to competitive products.

The resilience of the vertical fiber construction achieves superior mechanical integrity over other forms of nonwoven insulation and avoids compression, thereby retaining its acoustic performance over time.

DECI-TEX is typically combined and customized with acoustic facings, which provide an aesthetically pleasing, durable and moisture resistant surface.

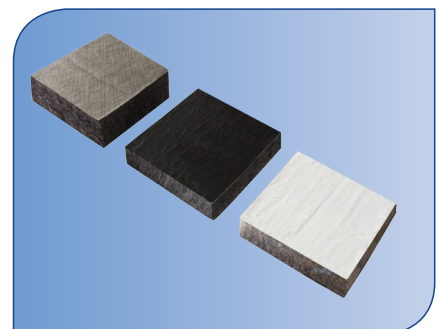

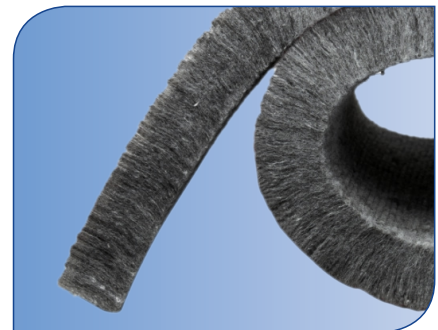

Key Product Attributes

- Ability to be exposed to higher temperatures
- Improved thermal resistance vs. foam
- Improved sound absorption at diesel engine frequencies
- Hydrolysis resistant
- Does not hold fluids and does not support mold growth
- UL94 HF-1 certified / UL2200 compliant
- Repositionable PSA option

Typical Applications

Noise reduction for industrial enclosures:

- Generator sets
- Air compressors
- Pumps
- HVAC units
